

John Florentino D. Dunglao

Senior Web Developer | Full Stack

Senior Full-Stack Software Engineer with 8+ years designing SaaS, fintech, and high-performance platforms handling 100M+ AUD in yearly transactions. Proven success in cutting CI/CD times 75%, reducing frontend bundle sizes 85%, and delivering cloud-native solutions at scale. Experienced in leading squads, mentoring developers, and driving agile delivery that aligns technical excellence with business impact.

Portfolio

www.johnflorentinodunglao.com (react)
vue.johnflorentinodunglao.com (vue)

Key Skills

Full Stack Development, User Experience (UX), Containerization, Microservices, Version Control, API Integration, Performance Optimization, Test-Driven Development (TDD), Agile/Scrum Methodologies, Responsive Design

Technical Skills

Proficient: PHP, TypeScript, JavaScript (ES6+), NodeJS, Python, Laravel, Vue, NestJS, Django, ExpressJS, Docker, Bitbucket Pipelines, Nginx, Apache, MySQL, PostgreSQL, Redis, MongoDB
Familiar: React, Angular, Java, Spring Boot, Flask, RabbitMQ, Elasticsearch
Tools: AI-assisted Development via LLMs, Cursor AI, Claude, Postman, Bitbucket Pipelines, GCP, PHPUnit, Vitest, Docker, Linode, DigitalOcean

Soft Skills

Cross-Functional Communication, Clear Written Communication, Continuous Learning, Calm Troubleshooting, Clean Written Codes, Technical Leadership, Conflict Resolution

Education

Polytechnic University of the Philippines
Business Teacher Education major in Information Technology
(2013 – 2017)

Zuitt – Coding Bootcamp

Web Developer Training for 3 months
(2017)

EXPERIENCES

DigiPlus Interactive Corp. – Senior Web Developer

Feb 2026 – Present | Onsite

- Owned feature development across seven enterprise back-office platforms serving core business domains including Marketing, Operations, eKYC, Legal, Risk Operations, Game Management, and Content Management.
- Served as a primary contributor to the eKYC platform, delivering secure and scalable functionality supporting customer verification and compliance workflows.
- Improved engineering efficiency by refactoring reusable boilerplates and modernizing legacy modules, enabling faster development of new back-office applications and simplifying long-term maintenance.
- Established and maintained shared *AI-assisted development* rules and engineering conventions adopted across the team to improve development consistency and code quality.
- Worked within Agile teams of 20–50 cross-functional stakeholders to deliver large-scale features through close collaboration with Product, Design, QA, and Engineering teams.
- Ensured technical implementations accurately reflect business requirements by validating functional specifications, clarifying ambiguities with stakeholders, and maintaining alignment with product documentation.
- Contributed to continuous improvement initiatives through code reviews, architectural discussions, and adoption of maintainable software engineering practices.

FoodByUs – Senior Web Developer

Jan 2023 – Sept 2025 | Remote/Hybrid

- Delivered 10+ SaaS features for 1,500+ active users, generating about 100 million AUD transactions yearly, improving customer adoption and engagement.
- Built a centralized feature flag system, cutting feature development effort by ~20% and reducing release rollbacks by 60% and increasing delivery confidence.
- Replaced AG Grid with a lightweight custom Vue data table (300KB), reducing bundle size by 85% and improving page responsiveness.
- Reduced build pipeline runtime from 10–12 minutes to just 3 minutes, enabling faster releases.
- Designed and implemented OCR-based invoice processing, streamlining buyer workflows, and driving higher platform adoption.
- Introduced branching strategies to implement in development across all squads that became the standard for everyone.

Freelance Developer – Full Stack Developer

Mar 2022 – Dec 2022 | Onsite

- Delivered 4 end-to-end full-stack applications (e-commerce, SaaS, and real-time web apps).
- Designed and deployed secure, scalable infrastructures with optimized relational databases and RBAC systems.
- Implemented real-time websocket features for games and interactive apps, improving user engagement.
- Built microservices-based architectures to improve scalability and maintainability.
- Collaborated directly with clients from requirements gathering to deployment, achieving 100% delivery acceptance.

Vavasoftware

Feb 2021 – Sept 2021 (Senior Web Developer)

Aug 2019 – Feb 2021 (Web Developer)

- Integrated 7+ web-based games into the platform, generating 300 million won yearly, serving 500+ active users.
- Led a UI revamp, improving usability and visual consistency across the platform.
- Optimized slow database queries, cutting load times, and improving scalability.
- Coordinated third-party API integrations with product and art teams.
- Mentored 4 junior developers, onboarded 3 senior hires, and enforced code quality standards via reviews and deployment approvals.
- Led sprint meetings, managed tickets, and coordinated cross-functional planning with designers and backend engineers.

MFT Group of Companies

Nov 2018 – Aug 2019 (Software Engineer)

Feb 2018 – Nov 2018 (Associate Web Developer)

- Developed a websocket-based system to stream and display live stock market data serving 300+ active users.
- Built real-time parsers and visualization tools for financial data to support decision-making.
- Led and implemented a UI redesign for the corporate site, improving branding and user experience.
- Enhanced and maintained the Order Management System website, reducing downtime and ensuring seamless usage for 8 stock traders handling live trades.
